Research Summary

Ph.D. researcher specializing in the systems-level architecture and distributed acceleration of Large Language Models (LLMs). My work focuses on pushing the physical limits of hardware utilization, from bare-metal CUDA/Cutlass kernel engineering, to designing topology-aware 5D parallel training engines. I build the underlying computational and cross-GPU interconnect infrastructure required to eliminate network bubbles and compute bottlenecks at massive scale.

Domain Expertise & Technologies

Languages & Frameworks: C/C++, Python, CUDA, Triton, PTX, PyTorch, Cutlass CuTe, CuTeDSL, NCCL, MPI

GPU Programming & Architecture: Asynchronous Pipelining, Persistent Kernels, Warp Specialization, Memory Coalescing, NVIDIA Hopper (TMA, WGMMA), NVIDIA Ampere

Distributed Systems: 5D Parallelism (DP, TP, PP, CP, EP), Customizing Collective Optimization (`all_reduce`, `all_to_all`, ...)

Education

University of Oregon *Sept 2024 – Present*
PhD in Computer Science

- GPA: 4.16/4.0, Excellent Degree
- Research Topic: Efficient LLMs
- Supervisor: Assoc. Prof. Thien Huu Nguyen, thienn@uoregon.edu

Hanoi University of Science and Technology *Sept 2018 – May 2023*
BS in Computer Science

- GPA: 3.71/4.0, Excellent Degree
- Advisor: Dr. Linh Ngo Van, linhnv@soict.hust.edu.vn

Experience

Amazon AGI, Annapurna Labs *Applied Scientist Intern* *Cupertino, CA, USA Jun 2026 – Sep 2026*

- Accelerated parallel speculative decoding for Large Language Model (LLM) inference.

Microsoft Research *Research Intern* *Redmond, WA, USA Jun 2025 – Sep 2025*

- Engineered and optimized "Megakernels" on NVIDIA GPUs to accelerate Large Language Model (LLM) inference and reduce memory-bound latency.
- Designed low-level scheduling methods and custom fused operators using CUDA/Triton, maximizing hardware utilization and minimizing kernel launch overhead.

VinAI Research *AI Resident* *Hanoi, Vietnam Jul 2022 – Jul 2024*

- Supervisors:
  - Asst. Prof. Luu Anh Tuan, anhtuan.luu@ntu.edu.sg
  - Assoc. Prof. Thien Huu Nguyen, thienn@uoregon.edu
- Projects:
  - **A Spectral Viewpoint on Continual Relation Extraction**

- **Transitioning Representations between Languages for Cross-lingual Event Detection via Langevin Dynamics**

Open Source Contributions

- **Unsloth (PR #238)**: Engineered a highly optimized rotary embedding (RoPE) kernel using OpenAI Triton.
  - Redesigned memory access patterns to significantly improve throughput for LLM inference and training.

Projects

Custom 5D Parallel LLM Training Engine *PyTorch, NCCL, Distributed Systems*

- Engineered a Megatron-style distributed LLM trainer from scratch, implementing Data (DP), Tensor (TP), and Pipeline Parallelism (PP) with micro-batch scheduling and zero-bubble gradient routing.
- Architected a topology-aware Context Parallelism (CP) backend, combining DeepSpeed Ulysses for intra-node NVLink saturation and Zigzag Ring Attention for inter-node scaling.
- Implemented Expert Parallelism (EP) for Mixture-of-Experts (MoE) architectures, utilizing custom autograd wrappers and `all_to_all` collectives for token dispatch and dynamic capacity-factor load balancing.

High-Performance GPU Kernel Suite *CUDA, Triton, Cutlass CuTe*

- Engineered custom GEMM and FlashAttention kernels from scratch using plain CUDA and Cutlass CuTe, progressively optimizing memory access, coalescing, and multi-level tiling to outperform cuBLAS.
- Utilized advanced NVIDIA Hopper hardware features, including Tensor Memory Accelerator (TMA), WGMMA instructions, asynchronous pipelining, and warp specialization.

Vistral-7B-Chat *Vistral*

- Introduced Vistral-7B-chat, a SOTA conversational Large Language Model for Vietnamese. Outperforms ChatGPT and Gemini in Vietnamese benchmarks. Achieved over 100,000 downloads.

Academic Service

Conference Reviewer: ACL ARR 2023, ACL ARR 2024, ACL ARR 2025

Awards

Prestigious Recognition Academic Excellence

- Lokey Award (2024-25)
  - Prestigious award from the Department of Computer Science, University of Oregon.
  - Granted to top graduate students in science fields.
  - Funded by Mr. Lorry I. Lokey, allocated by UO Division of Graduate Studies.

First Place Award AI Competitions

- BKAI-NAVER Challenge 2022 (May 2022)
  - Task: Intent Detection and Slot Filling for smarthome systems.
